

Professional Summary

Software Engineer with 2+ years of experience designing and delivering scalable, secure, full-stack SaaS systems for product platforms such as Jugnoo, Yelo (JungleWorks), and Unstop. Proven ability to design microservice modules, optimize high-traffic APIs (~35% faster), and raise third-party integration success rates to ~99% using retries with exponential backoff, circuit breakers, and idempotency. Led a team of 5 developers and owned features end to end from requirement analysis to production rollout. Skilled in Node.js, Express.js, React.js, Next.js, TypeScript, Laravel, MongoDB, MySQL, Redis, Docker, and AWS, with strong foundations in system design, API security (JWT, RBAC), database optimization, and production debugging. Focused on improving reliability, reducing incident resolution time (~40% faster), and delivering business-focused solutions at scale.

Technical Skills

Frontend: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Bootstrap

Backend: Node.js, Express.js, REST APIs, Java, PHP, Laravel

Databases: MongoDB (NoSQL), MySQL, PostgreSQL, Redis

DevOps & Tools: Git, GitHub, Docker, Jenkins, CI/CD Pipelines, AWS, Jira, ClickUp

Monitoring & Debugging: Clockwork, Datadog

Core Strengths: System Design, Microservices, API Security (JWT, RBAC), Resilience Patterns (Circuit Breaker, Retry with Backoff, Idempotency), Data Structures and Algorithms, Background Job Queues, Database Optimization, Debugging

Experience

Unstop

Apr 2026 – Present

Software Development Engineer

Delhi

- **API Security:** Hardened the API layer with JWT authentication, RBAC-based authorization, token validation, and rate limiting, closing access-control gaps and reducing unauthorized and abusive request exposure across all secured endpoints.
- **Query Optimization:** Diagnosed performance bottlenecks in Laravel/MySQL workloads using Clockwork, then resolved N+1 queries, full table scans, excess data fetching, redundant calls, and poorly structured joins. Applied eager loading, composite indexing, targeted column selection, and query refactoring to reduce key endpoint response times from ~900 ms to ~550 ms (~40% faster).
- **Feature Engineering:** Owned delivery of 8+ features using React.js, Node.js, and TypeScript from requirement analysis through phased rollout, hitting ~90% on-time releases with ~40% adoption among active users in the first month.
- **System Design:** Designed loosely coupled microservice modules with versioned API contracts and clear service boundaries, limiting most feature changes to a single service (down from ~3) and cutting cross-team integration bugs by ~30%.

JungleWorks Pvt Ltd

Nov 2024 – Mar 2026

Software Engineer

Mohali, Punjab

Product-based SaaS Platforms: Jugnoo & Yelo

- **Integrations:** Engineered third-party integrations (payment gateways, notifications, partner APIs) with retry and exponential backoff, circuit breakers, and idempotency keys, raising success rate from ~94% to ~99% and preventing duplicate transactions during third-party outages.
- **API Engineering:** Designed and enhanced REST APIs on Node.js and Express.js with request validation, RBAC authorization, and structured error handling, reducing API error rates by ~30%.
- **Technical Leadership:** Guided 5 developers through architecture discussions, code reviews, sprint planning, and mentoring, improving on-time sprint delivery from ~70% to ~85%.
- **Production Debugging:** Performed root-cause analysis using logs, database analysis, and monitoring, then shipped permanent fixes, reducing mean time to resolution from ~6 hrs to ~3.5 hrs and cutting repeat incidents.
- **Performance Engineering:** Optimized queries, indexing, and Redis caching, and moved failure-prone work to background job queues with automatic retries, improving average response time by ~35% and reducing manual reprocessing of failed jobs.

WTechy Pvt Ltd

Jun 2024 – Nov 2024

Web Developer Executive

Panchkula, Haryana

- **Frontend Engineering:** Built responsive React.js and Next.js applications with reusable components and SEO-focused architecture, improving Lighthouse performance scores from ~65 to ~88 and cutting UI build time through component reuse.
- **Backend Engineering:** Developed Node.js and MongoDB REST APIs with token-based authentication and session management, with optimized data flows for faster responses.
- **CMS Integration:** Integrated CMS solutions into client applications, reducing content update turnaround by 40% and removing developer dependency for routine edits.
- **Solution Delivery:** Translated client requirements into technical specifications and production-ready implementations across multiple web projects, delivered on schedule.

Education

Panjab University

2021 – 2024

Master of Computer Applications (82%)
